

MAY 2015

-----

THANK YOU  
EPIC!!

We would like to thank EWU - EPIC Adventures for making a canoe & geology trip possible. On May 20, 2015 the structural geology (GEOL 431) class ventured to a mysterious island composed of Precambrian metamorphic rocks in the middle of Bonnie Lake, WA. Measuring the orientation of folds and foliation from these over 1 billion year old rocks will shed light as to the orientation of past tectonic activity in the area. The trip allowed us to use basic structural principles in adventurous way and prepare for our Geology Field Camp this summer. Our field trip was an amazing experience and would not have been logistically or financially possible without the help of EPIC. We greatly appreciate the help of Leah, Hillbrand JJ Courtney, and Miles who guided us safely during our spectacular island geologic adventure!!

Thank you!
