$\qquad$

Objective: Determine a spherical object that would have the volume of the sun if the earth was a cherry tomato.

The final product will include complete sentences that describe each step of the process. The final product will also include appropriate mathematics that support problem solving and justify conclusions. Google may only be used to determine the diameter of an object or to find a formula.

The final product will be neat, organized, and easy to read. Use this paper as a cover sheet.
